

The Challenge

Businesses aim to operate in a controlled & secure manner, however as projects take priority over system admin & housekeeping, hygiene becomes neglected. This is when risk enters the business.

Consider the many organisations with heavy cyber investment that thought they were in an optimum 'controlled' position and have still fallen foul to breaches.

Secrutiny has developed a method and process of auditing the key indicators that signify risk of crossing into breach.

The Solution

Our Cyber Risk Audit has been developed to provide businesses with a method and process of auditing the key indicators that signify risk of crossing into breach.

Meaningful FACTS are delivered to empower business stakeholders to determine RISK and EVIDENCE cyber security priorities as a methodology to reducing risk.

The Audit informs policy and security improvement through hygiene, controls, education, governance or technology, for greatest risk reduction.

How It Works...

The FACTS are derived by assessing an organisations IT environment over 4 to 8-weeks, with an agile and non-disruptive process.

Think of it like a forensic investigation of each device in the estate to ascertain its purpose, how it's being used to provide FACTS on:

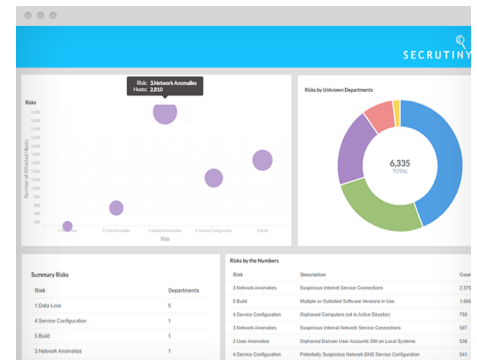

1. Potential data loss.
2. Previous & active indicators of compromise.
3. Susceptibility to breach.
4. Internal risks including:
 - OS build inconsistencies.
 - Multiple or outdated software versions.
 - Persistent services.
 - User profile propagation.
 - Overprivileged users.
 - Suspicious service connections & configurations.
 - Orphaned computers, users & admins.

What Do You Get? SMART

We believe that for data to be meaningful, it should be alive - allowing it to be queried and challenged as needed.

That's why results are delivered through SMART, our interactive analytics tool that packages your data by user, host, business unit, operating system, software versions, risk category etc. to provide valuable insight into current posture and IT hygiene.

“Over nearly 30 years in Information Security, Secrutiny’s Cyber Risk Audit has given the most meaningful results by far.”
