

SECURITY

CYBER RISK
MANAGEMENT

About Us

Secrutiny is revolutionising cyber security strategy with unique and forward-thinking cyber risk management services.

We offer organisations a way to determine their cyber security risk and exposure to inform and evidence security improvement priorities.

Organisations have become caught in a cycle of annual technology additions, and a 'strength in depth' belief, fed by messages of the volumes of threats that need defensive action, propagated by vendors and the media.

So, Secrutiny developed a SMART application to deliver fact to business risk and security ecosystem. By working with facts, security investments and services are understood by the business, IT and security partners.

Here's How We Can Help!

Facts are derived by assessing an organisations security posture and hygiene with our Cyber Risk Audits to identify operational risk, misuse, infection and compromise.

Endpoint Cyber Risk Audit

This is a point-in-time evaluation of security hygiene to drive policy and posture improvement, involving two areas of assessment: Endpoints (workstations & servers) and Active Directory.

Network Cyber Risk Audit

The Network audit augments the Endpoint CRA and provides an understanding of internal and external communications to identify:

- 🔍 Unauthorised or clandestine communications.
- 🔍 Ungoverned devices.
- 🔍 Indicators of Compromise (IOC).
- 🔍 Policy violations.

Live Cyber Risk Audit

To supply further enrichment, the Live CRA looks at behaviours through user and entity behavioural monitoring and network visibility of user and device communication.

Valuable
insight into
your IT
operational
risks.

Get control
of hygiene,
posture and
risk.

Inform &
evidence
security
improvement
priorities.
