

# New Survey Reveals 83% of Cyber Security Professionals Are Concerned About Data Loss Post Threat

## Key Findings...

**73%** of respondents say it takes them over an hour to analyse malicious activity and piece together an Indicator of Compromise (IOC) or Indicator of Attack (IOA).

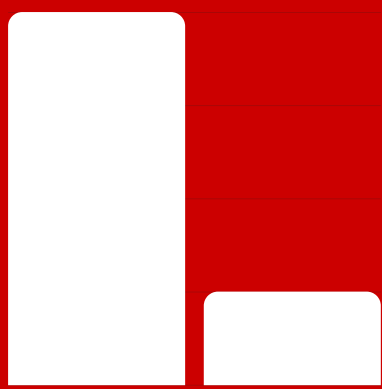

**49%** of the respondents admit their endpoint protection solutions do not integrate with other key security tools, such as their SIEM or SOC. Majority of respondents have both an EDR and an EPP solution.

of respondents admitted to incidents and alerts that required investigation in the past 18 months.

**1/3**

of respondents collect, record and store a central bucket of data (system event logs etc.) to investigate incidents

**2/3**

## TOP SECURITY CHALLENGES RESPONDENTS ARE UP AGAINST

- Expanding responsibilities; such as supplier or third-party risks
- Lack of skilled resource
- Changing threat landscape

## FOLLOWED CLOSELY BY

- Limited, or no, ability to proactively hunt for threats
- Increasing frequency and scale of attacks

## Solution

By integrating EDR and EPP products organisations can defend every endpoint against every attack at every stage in the threat lifecycle, ultimately benefiting from a secure and effective IT infrastructure.
